PC Revival Team Charter

Team purpose and Values

The team aim's to collaboratively design, develop, test and deliver a realible user-friendly system that supports affordable laptop repairs and refurbished laptop sales

Collaboration:
Team members share knowledge and assiste one another

Accountability:
Each member will take a responsibility for assigned tasks and deliverables.
Kyle Marais

Respect:
Everyone's, opinions, contributions and differences will be treated fairly.
Kyle Marais

Quality
The team will aim to produce reliable, maintainable, and well-tested software
Kyle Marais

Continues Improvments
The team will learn from feedback, testing and mistakes to improve its work
Kyle Marais

Conflict Resolution

PC Revival team recognises that there will be disagreemetns because of different cpinions, technical challenges, workload distribution or missed deadlines. Conflict will be addressed early and constructively

1) Address the issue respectifully:
Members involved will communicate directly and allow each person to explain their perspective.
Kyle Marais

2) Focus on the problem:
The team will identify the cause of the disagreement without personal attacks or blame.
Kyle Marais

3) Explore solutions:
Members will discuss possible solutions and agree on a fair way forward.
Kyle Marais

4) Faciliate meidation: If disagreement continues, the SCRUM Master or another mutually agreed team member will facilitate a discussion.
Kyle Marais

5) Escalate when necessary: if the conflict remains unresolved or affect project delivery, the team will seek guidance from the project supervisor.
Kyle Marais

6) Review outcome:
The team will check whether the agreed solution has resolved the issue and improved collaboration.
Kyle Marais

Decision Making Process

1) Discuss the issues:
Team members share relevant information, ideas and concerns.

2) Evaluate options:
The team considers project requirements, technical feasibility, quality, time constraints and potential risks.

3) Seek Consensus:
The team attempts to reach an agreement that members can support.
Kyle Marais

4) Vote when necessary:
If consensus cannot be reached within a reasonable time, the team will use a majority vote.
Kyle Marais

5) Respect role Responsibility:
The Product Owner has responsibility for peoduct backlog prioritisation, while developers make technical implemtation decisions collaboratively.
Kyle Marais

6) Record the outcome:
Important decisions are documented in the product backlog.
Kyle Marais

Agile Workflow and Communication Methods

The team will:
1) Break project reqirements into user stories and manageable tasks.
2) Prioritise Work according to importance and project deadlines

3) Demonstrate completed features and gather feedback.
4) Conduct retrospective to identify what went well and what needs improvements.
Kyle Marais

Communication Methods:
1) Whatsapp for quick updates, meetings and reminders
2) Github for Source code management.
3) Trello for task allocation, progressive tracking and backlog management

Goals and Success

Team Goals:
1) Develop a functional website that shows laptop rapairs and sales of refurbished laptops.
Kyle Marais

2) Implement a system that allows customers to submit and manage laptop repair requests.
Kyle Marais

3) Develop a database to store and manage customer information, repair reuquests, laptop inventory and service information.
Kyle Marais

4) Provide a user-friendly interface for students to easilty interact with.
Kyle Marais

Success metrix:
1) Functional System:
All agreed core features work according to their acceptance criteria
Kyle Marais

2) Database integration
Customer records, repair requests and inventory information can be stored and retrieved.
Kyle Marais

3) Software Quality:
All planned tests are completed, and critical defects are resolved before submission
Kyle Marais

4) User Expereince:
Team members or selected test users can complete the main system tasks successfully.
Kyle Marais

Roles and Responsibilities

1) Business Idea and Brainstorming:
(Kyle Marais)
(Mbasa Mcakumba)
(Ayabonga)
(Mangaliso Snothando)
(Luxolo Matshikiza)
(Siyamthanda Mnyabiso)
(Vumbhoni Clifford Mnisi)
Brainstorm ideas related to affordable laptops.
Kyle Marais

2) Survey and Requirements Gathering
(Vumbhoni Clifford Mnisi

Design a survey to gather information about student;s laptops usage, repair needs and purchasing
Kyle Marais

3) Planning and Analysis
(Mangaliso Snothando)
(Mbasa Mcakumba)
(Vumbhoni Clifford Mnisi)
(Ayabonga)
(Kyle Marais)
(Siyamthanda Mnyabiso)

Define functional and non-functional system requirements.
Identify main users and their interactions with the systems
Kyle Marais

4) System Design
(Mangaliso Snothando)
(Mbasa Mcakumba)
(Vumbhoni Clifford Mnisi)
(Ayabonga)
(Kyle Marais)
(Siyamthanda Mnyabiso)

Create wireframes and mock-ups for PC-Revival website
Design the navigation page layouts and user interaction flow
Kyle Marais

5) Frontend Development
(Mangaliso Snothando)
(Mbasa Mcakumba)
(Siyamthanda Mnyabiso)

Build the website pages and reusable interface components.
Implement navigation, layouts, forms and relevant user interactions.
Kyle Marais

6) Backend Development
(Ayabonga)
(Siyamthanda Mnyabiso)
(Mangaliso Snothando)

Configure the Supabase project and application environment variables.
Create and configure database tables for customers, repair requests, laptop inventory, and service information.
Kyle Marais
